Can I publish my Dash/Streamlit/Bokeh/Shiny for Python application to Posit Connect?	1
Can I deploy my Flask/FastAPI API to Posit Connect?	1
Can I publish Jupyter Notebooks to Posit Connect?	1
Can I schedule and email Jupyter Notebooks?	2
Can I install Python packages?	2
Can I use multiple versions of Python?	2
Can I use other kernels?	2

Can I publish my Dash/Streamlit/Bokeh/Shiny for Python application to Posit Connect?

You can deploy Dash, Steamlit, Bokeh, and Shiny for Python applications to Posit Connect using the [rsconnect-python package](#) from the terminal.

Can I deploy my Flask/FastAPI API to Posit Connect?

You can deploy Flask and FastAPI APIs to Posit Connect using the [rsconnect-python package](#) from the terminal.

Can I publish Jupyter Notebooks to Posit Connect?

You can publish Jupyter Notebooks to Posit Connect using the [rsconnect-python package](#) from the terminal.

Can I schedule and email Jupyter Notebooks?

You can schedule and email Jupyter notebooks from Posit Connect once they are published.

Can I install Python packages?

An administrator may have already installed Python packages on the server; you can install additional Python packages in your home directory or a virtual environment using `python -m pip install`. You can see all of the packages already installed using `python -m pip list`.

Can I use multiple versions of Python?

You can utilize Jupyter kernels with a different Python version if your server administrator has added them. If you need a different version of Python, please contact your server administrator.

Can I use other kernels?

You can install and customize JupyterLab and Jupyter Notebook with other third-party kernels. Only notebooks that use the Python kernel can be published to Posit Connect.
